PERSONAL STATEMENT

I am an engineer and chronic disease epidemiologist working towards the integration of precision medicine, disease surveillance, and data solutions for improving public health. My experience spans cardiometabolic health, maternal and child health, micronutrient deficiencies, mental health, and cognition. Currently, I build interpretable models to study disease heterogeneity and map its spatial distribution using probabilistic and non-probabilistic data sources. All my research is done in collaboration with clinicians and social scientists, using traditional statistical models (longitudinal analysis, latent variable models), causal inference (observational, graphical), and machine learning approaches (supervised and unsupervised methods).
